1. Strip the cable according to the given dimensions . Slide it into the heat shrink tubing①(not furnished) .

2. In case of a screened cable , widen and pull the screen all the way to the back . Fix the positioner on the crimping tool and set selector to the number corresponding to the conductor AWG as indicated on the positioner label . Fit conductor into the contacts②and make sure it is visible through its inspection hole in the crimp barrel . Open crimping tool then push contact fully into positioner and complete one crimping cycle . Remove from crimping tool and check that conductor is secure in contact and shows in inspection hole .

3. Slide crimped contact-conductor combinations according to the insulator marking by avoiding to twist the conductors . Introduce lightly the contacts into the insulator and verify that no conductors are crossed before pushing them completely . Check that all contacts hold in the insulator by verifying their alignment at the front of the insulator and they should remain in position when each conductor is given a gentle pull . Check that retention of the contact is correct with the recommended test tool . Bring the screen around the rear of the plug shell③and secure it with a band-it tie-wrap④(not furnished) to fix the screen in place . Cut , if necessary the excess screen .

4. Slide the heat shrink tubing . With a heat gun fully shrink the tubing until it retracts .
