To all LEMO customers and business partners

Declaration on HEXAVALENT CHROMIUM

As a leading player in the international connectivity market, LEMO Group places the highest importance on complying with all applicable laws and standards in every country in which it operates.

Environmental responsibility is a core pillar of our commitment to our customers and partners, and our continuous regulatory monitoring ensures that we proactively address evolving requirements.

The surface treatments applied to our connectors result in the presence of trivalent chromium (Cr III), a stable and recognized safe form of chromium. We therefore confirm that

LEMO products do not contain hexavalent chromium (Cr VI).

For many years, LEMO has pursued a continuous improvement approach aimed at optimizing its manufacturing processes, with particular focus on eco-design and minimizing the environmental impact of its activities. This commitment enables us to provide high-quality products while upholding the environmental and compliance expectations shared with our customers.

For any further inquiries or requests for clarification regarding this declaration, please do not hesitate to contact us at: environmentcompliance@lemo.com.
